

VAERS COVID-19 Vaccine Adverse Events Data

438,440 Reports through July 02, 2021

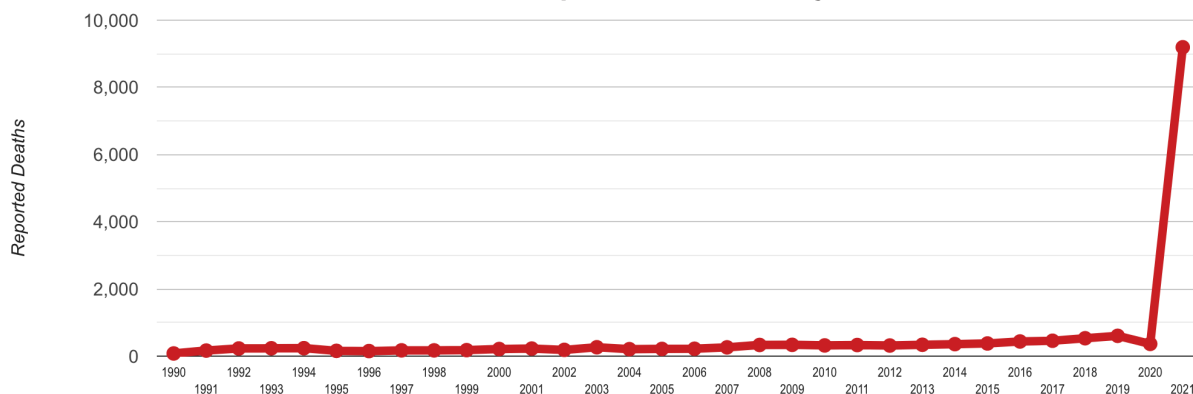

The **Vaccine Adverse Events Reporting System (VAERS)** was established in 1990 as an early warning system to detect possible safety problems in U.S.-licensed vaccines. Reporting is voluntary and this leads to significant undercounting of harms. Harvard Pilgrim Health Care conducted a study for U.S. Department of Health and Human Services that concluded that “fewer than 1% of vaccine adverse events are reported.”¹

This week’s new numbers are horrifying. 2,063 new deaths were added making it the deadliest week ever recorded by VAERS. There are now 9,048 reports of fatalities following these shots in the last 7 months and we know that this is just a fraction of the real total. This is the most catastrophic vaccine campaign in U.S. history. The coronavirus vaccine campaign has killed more Americans *than all other vaccines combined* over the last 30 years. The data show that these products must be pulled from the market immediately.

To put this in perspective, the 1976 swine flu vaccine campaign was halted after 25 deaths and 500 cases of Guillain-Barre Syndrome out of 40 million doses administered.² Why are public health officials today so callous about levels of death and injury that are *hundreds of times* worse than the 1976 vaccine campaign? *How many coronavirus vaccine deaths is too many for you?* What will it take for you to say “**Enough!**” We are asking you to use your voice to stop this disastrous medical experiment.

All Deaths Reported to VAERS by Year
